17 Now we move onto the coin slot. The coin slot in the original money box was cut on a circular saw, which is not something that I would recommend. For the coin slot in our money box, drill two 4mm holes 30mm apart...

18 ... and then cut a straight slot with a sharp craft knife. Cutting a straight row of holes would make this easier...

19 ... or use a rotary carving tool fitted with a side or slot cutter. Here you can see the completed lid

20 For decoration, after spraying the box grey I hand painted the bottom ring with acrylic paint

21 Acrylic artist's paint is ideal for this folksy style, it also dries quickly and is water based

22 Holding the box between lathe centres will enable you to paint detail with a steady hand

23 Here is the finished money box ●
