AXMINSTER APF 10 EVOLUTION POWERED RESPIRATOR

£199.94

The new APF10 Evolution respirator from Axminster is not just evolutionary in name. This positive pressure powered respirator eliminates the drawbacks encountered with standard negative pressure face masks. The motor unit blows filtered air down over the face at a rate of 160L/min. Fatigue caused by having to suck through a filter is no longer a problem; breathing is normal and comfortable. The air exiting around the sides and bottom of the mask is at a slightly higher pressure than that outside, thereby forming a most effective seal. Beards are not a problem, and if you wear glasses, these will not fog or mist up as you breathe out.

With the motor and filters mounted on the peak of the bump cap and the battery at the rear, the balance of the APF 10 Evolution unit is excellent. Combined with the low overall weight, it is very comfortable. The Li-Ion batteries give a runtime of eight hours on a full charge. The filters are easy to inspect and replace and the bump cap's outer cover is removable for washing. The unit provides FFP2 respiratory protection to EN12941:1988 TH1P. The bump cap gives head protection to EN812. The clear visor gives you a wide field of vision along with impact protection to EN.166.B.1. The respirator is supplied with an eight-hour battery, plus charger, two filters, a flow-rate meter and complete instructions all within a strong storage box.

Remember, you only get one pair of lungs.

INSIDE AND OUTSIDE CALLIPERS

Turners Retreat is now stocking two new 200mm digital callipers – one for internal and one for outside measuring – which help to eliminate guesswork involved with using traditional callipers. These fractional display callipers can be preset to a specific measurement or simply used to display the size of work being measured. The 8in inside callipers are made of aluminium, are spring loaded for easy operation and feature a large handle for convenient use. The easy-to-read display shows measurements in fractions, decimals or millimetres and will measure up to an 8in diameter. The battery is included.

SANDI PADS

FROM £2.99

Johnson Tools has recently introduced a new selection of power sanding pads and interface pads to suit a wide range of the sanding situations turners encounter. The Sandi Pad EVA foam pads are supple and flexible allowing them to follow the tighter contours of a workpiece, they also feature a very high quality hook attachment material that will not let go of your abrasives mid-use, unlike cheaper products available on the market. The Premium Urethane pads are dense but still flexible, and also feature a very high-quality hook attachment. The High Profile pads are of a soft/medium density meaning they can be used without an interface pad. Sandi Pad Premium Grade Interface pads are designed to convert medium density pads into soft pads thus allowing a higher degree of flexibility. They feature a superior hook-and-loop attachment material that fixes firm and will not let go.
