A mixture of press releases showing the latest tools and products on the market

## CGV286-4 36L 2000W COMPACT EXTRACTOR, 4IN (63MM) INLET

This compact 36L machine is ideal for general maintenance in smaller premises and workshops. In addition to wood dust and chippings, it can tackle workshop debris, nails, and many other types of waste with ease and features the CamVac triple filtration system for effective treatment of fine particles. The cyclonic neutral vane theory technology draws the waste into the drum with great force and directs it around the outside edge, keeping the filters cleaner and allowing the waste to fall to the bottom of the drum.

The lid features an acoustic outlet for the motor. When the optional hose is fitted, the sound of the motor can be directed away from the machine, greatly reducing noise in the workshop.

The CGV286-2 features two motors, giving 2kW of power for extremely effective extraction. The 100mm inlet is well suited for use with woodworking machinery, particularly those which produce coarser waste materials such as planer thicknessers and table saws. Optional reducers and adaptors are available to allow the use of a 63mm hose and other fitments if required.

**£290.02**

### KEY FEATURES

- The acoustic outlet effectively reduces noise during operation when the optional 63mm hose is fitted
- The drum filter and motor filters give three stage filtration for fine dust
- The unique cyclonic inlet directs the waste away from the filters and gives excellent suction

## FLEXCUT KNIFE STROP

Although Flexcut call this a knife strop, it can be used for other edge tools just as effectively. If a blade has already been honed, it will benefit from stropping to polish the steel further and give an extra degree of sharpness. Regular stropping of a blade means less honing which saves time and effort. The strop is supplied with a block of Flexcut Gold Polishing Compound for a razor-sharp edge.

**£12.46**

## SUPERIOR BOWL GOUGES

**FROM £78**

The Serious Ultimate Bowl Gouges are available in 13mm and 15mm diameters (corresponding to 10mm and 13mm bowl gouges respectively, in English parlance). Each tool is 305mm long. Unusually, these tools are deep fluted from end to end, with the double ends CNC rounded. The tools do not arrive sharpened so that the user can apply their personal preferred grind to the gouge (using a standard aluminium oxide wheel). The tool length combined with the use of, for instance the Serious Camlock Handle, provides 230mm of useful steel. Alternatively you can plant your Serious Ultimate Bowl Gouge into your own turned wood handle.
