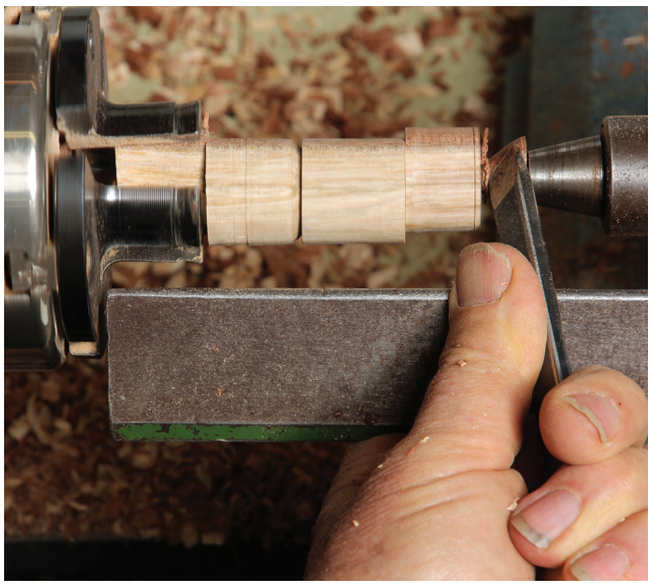
Finish-turning the second face of a doughnut screwed to a backing plate

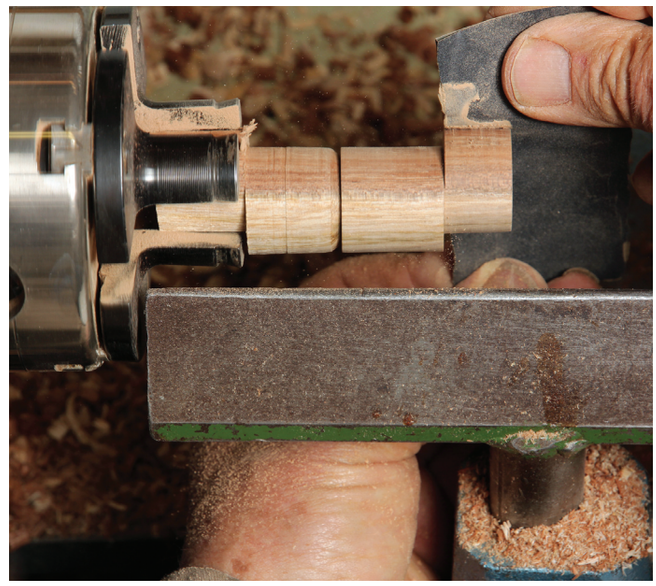
Bandsawing the third cut to free two knights N3

The bandsawing of an N3 doughnut completed

Cutting the junction between the top and bottom parts of a knight N4. The workpiece is mounted between centres on axis E-E



Cutting the waste from the top of a knight N4. The workpiece is chucked in pin jaws on axis E-E



Sanding back the hardened coat of one-part polyurethane from the top of a knight N4

Conclusion

My main purpose in writing this five-part series was to illustrate the infinite scope for turners without high carving skill to produce chess sets with some degree of design originality and high playability. You could exactly copy the designs shown on which I am not claiming design registration or copyright. However, why not try to design your own sets? Over to you. ●

FURTHER READING

There are about 20 books published on chess sets.
The six books listed below are strong on turned chess set designs.

Darlow, Mike, 2004, *Turned Chessmen*, The Melaleuca Press, Sydney.
Dean, George, 2010, *Chess Masterpieces*, Abrams, New York.
Graham, F. Lanier, 1968, *Chess Sets*, Studio Vista, London.
Kloprogge, Mathieu and Ine, 2007, *Chessmen Art and History*, Gopher B.V., Amsterdam.
List, Larry, editor, 2005, *The Imagery of Chess Revisited*, George Braziller, New York.
Schafroth, Colleen, 2002, *The Art of Chess*, Harry N. Abrams, New York.
Williams, Gareth, 2000, *Master Pieces*, Allen & Unwin, Sydney.

There is also a society of chess set collectors called Chess Collectors International, which publishes the quarterly journal *The Chess Collector*.
