THREADCUTTING TOOLS FROM ROBERT SORBY

PRICES FROM £25.55

Threadcutting is becoming an increasingly popular discipline among woodturners as projects like lidded bowls and boxes become more common and the understanding of the tools used to make them more widespread. Screw threads can be achieved using a host of various tools, but the traditional fine-threaded application used by turners still fascinates and inspires.

Robert Sorby manufactures a range of high-speed steel tools to equip the turner and enable him or her to easily create a variety of different thread sizes. Threadcutters are available in 10, 16 and 20 TPI (threads per inch) in pairs or boxed sets. Pairs and sets include tools to cut an external and an internal thread. Sets also include a handy sizing gauge to take all the guesswork out of dimensioning as well as a 'how to' DVD produced in conjunction with Allan Batty. The external and internal threadcutters allow the user to create an exact matched set of 'male' (external) and 'female' (internal) threads.

Robert Sorby is the only production tool manufacturer to produce its threadcutters with the thread pitch included in the teeth and followers. This ensures the tool follows the thread being created accurately unlike traditional thread chasers that have perpendicular teeth and followers that can easily foul on the thread. Robert Sorby also offers a relief cutting tool and a tool support to make the process easier. The relief cutting tool is designed so that the woodturner can produce a relief cut at the bottom where the threaded section of the box/lid will be created.

FROM £3.96

EBONITE PEN BLANKS NOW AVAILABLE FROM BEAUFORT INK

Used by the world's prestige pen manufacturers in their classic marques, ebonite has long been one of the materials of choice in America for pen kits and kitless pens, and is now readily available in the UK too. Made from vulcanised rubber, it's not a soft bouncy material, but a hard substance used in many applications where stability, workability and resilience are important. Many clarinets and oboes, for instance, are made from ebonite, as are tobacco pipe mouthpieces. Ebonite takes a fine thread, holds fine detail, cuts, drills and sands easily, and polishes to an extremely high, lasting shine, without the need for finishes or waxes. Beaufort Ink have added a range of eight different colourways, including classic black, to their ever growing catalogue, which are available in three different lengths depending on your requirements.

PEN MAKER'S BEESWAX SHEETS

These natural beeswax sheets are the fastest way to prepare pen and project tubes for gluing and casting. They make plugging quick and easy: just press the ends of the tube onto the beeswax sheet and you're plugged and ready to go. When you've finished casting, you can re-use the beeswax for finishing or roll it out and use it again. The sheet measures 200 x 405mm.
