

8 Use a 3mm parting tool to turn a small spigot at the end of the blank (for fixing the head) and a 17mm recess to represent the feet

9 Carry out the main shaping of the bunny using a standard 10mm spindle gouge and complete with a 13mm round skew. Before parting off, drill two 3mm holes to accept the arms (see position on drawing)

10 Turn the limbs in a Jacobs chuck. Boxwood (*Buxus sempervirens*) can be used to give a slight contrast to the holly

11 Shape the ears with a skew chisel. Flatten one side of each ear by gripping the spigot end in a pair of pliers and holding against a small sanding disc

12 Assemble the bunny with a painted carrot in his paw. The egg can be left as plain wood if desired

13 Alternatively, decorate the inside and outside of the egg with acrylic paints, drawing pens and child-proof paint pens. Be creative: there are so many artistic opportunities available so do some lateral thinking. Ensconce the bunny in a garden full of carrots inside the egg

14 Another version of the Easter Bunny theme is to put your rabbit in a flower garden. To make the flower heads, hold a short length of 4mm holly cylinder in a Jacobs chuck and start by boring it centrally, using a 1mm drill bit firmly held in a wooden dowel handle. This hole is to accept the stem after turning. Use the short point of a skew chisel and then part off to create the flower. The bunny can hold a bunch of flowers in this version ●
