How to find the centre of timber

In the first of his new series of articles, **Philip Greenwood** looks at finding the centre of timber

In this first part of the new series I will look at questions that I have been asked, some by people new to turning and others who have been turning for a while. This month I will look at finding the centres of pieces of timber with methods I use on a day-to-day basis. Yes, there will be more ways than I have explained here. However, some of the conventional methods don't work with the odd shapes of timber I use. How accurate does finding the centre have to be? This depends on the project and how much spare capacity you have over the lathe bed.

PHILIP GREENWOOD

Philip has been woodturning since 1980 and started turning professionally in 1986. He was accepted onto The Register of Professional Turners in 2006. He is a member of the AWGB and AAW. He can be seen working in his workshop in North Yorkshire with many of his items on display. From here he runs courses. He demonstrates at clubs around the UK.
