A Pattern Language

Baobob

Max Brosi turning

LIKES

- Turning an idea that excites me into a finished piece
- Coming up with a new idea that makes me buzz
- When people buy my work
- Getting a new stock of fresh green oak
- Doing my own thing

DISLIKES

- When I don't get enough time at the lathe
- Getting hit on the knuckles by a large, off centre piece of spinning wood
- Forgetting to eat and getting weak and shaky when I'm turning
- Cleaning the workshop

HANDY HINTS

- When I turn a tube I use a calipers to make sure the outside is parallel, then I set aside the calipers and I make a small wooden T-square from scrap wood. The T at the top is the width of the inside of the tube, so when the T is a snug fit all the way down the inside of the tube, the walls are an even and parallel thickness. I find this easier than using a calipers in deep tubes.
- Use the lathe as an exploratory tool. It just makes wood go round in circles. The rest is up to you. Try and fail, learn from it, and do something exciting.
