11 From this point, the steps are entirely up to you. You can use a range of stains, acrylics, or other colouring mediums as you feel appropriate. If you would like to mirror my design, use a red alcohol stain here

12 On the central boss use a Spanish copper gilt paste. Between each of the decorative bands, cut a 2mm parting cut to define each area. This can also add contrast between different colours and textured areas

13 On the band with the hole texture, apply another guilt paste (antique green) using a finger to rub across the top of the surface to avoid filling the holes. Add a further band of red towards the outer edge. Continue to build up colour until you are happy with the finished look

14 Allow the stains and gilt creams to cure properly. Once cured, the guilt can be burnished. This is best achieved with the lathe stationary.

15 Once burnished, oil the whole face with Danish oil. Apply liberally and then remove excess and allow the oil to cure. Three coats will be needed. Once dry, remove the triptych from the chuck, remove the backboard and fill and abrade the screw holes. Mark the dead centre of each board 25mm from the top and, using a Forstner bit, create a hanging hole on each of the three boards

16 Should you have followed my design in making your own tryptich, your final piece should look something like this.

ALTERNATIVE DESIGNS

Some other ideas to complement your projects using oddments in this manner:

- Off-lathe decoration using rotary tools, burrs, cutters
- Addition of other materials such as metal leaf, metal plate, pins, nails and/or hardware
- Addition of found objects
- Scorching and wire brushing
- Presentation of component parts in an order other than that which they were turned
- Mount on a pedestal, cojoin with metal rods or taught cables
- Mount on an ebonised backboard within a conventional picture frame

The picture far right shows a departure from the norm, using similar principles to this project.
