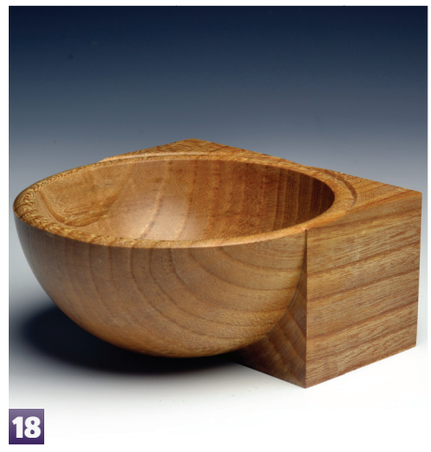
17



18

17 Finish the emerging bowl with a paste wax, applying it with a soft cloth and then buff off – alternatively, you could simply use your favourite finishing technique

18 Your final emerging bowl should look something like this

EXPLORE THE POSSIBILITIES

Look again at step 10. Imagine making the bowl diameter smaller and then cutting a series of beads, side by side on the curved surface, with grooves between them approximately 4mm deep. Continue until step 15 and when the bowl interior is finished, cut another series of beads with 4mm deep grooves between them. These will crossthe previous grooves at right angles forming a lattice in the bowl section. Continue to split the bowl from the backplate but then imagine re-attaching it by its 'top' surface (the one with the rim of the bowl). Now you can turn the square section and decorate it how you like. You start to obtain very interesting effects – most of which have been explored by Hans Weissflog and others.
