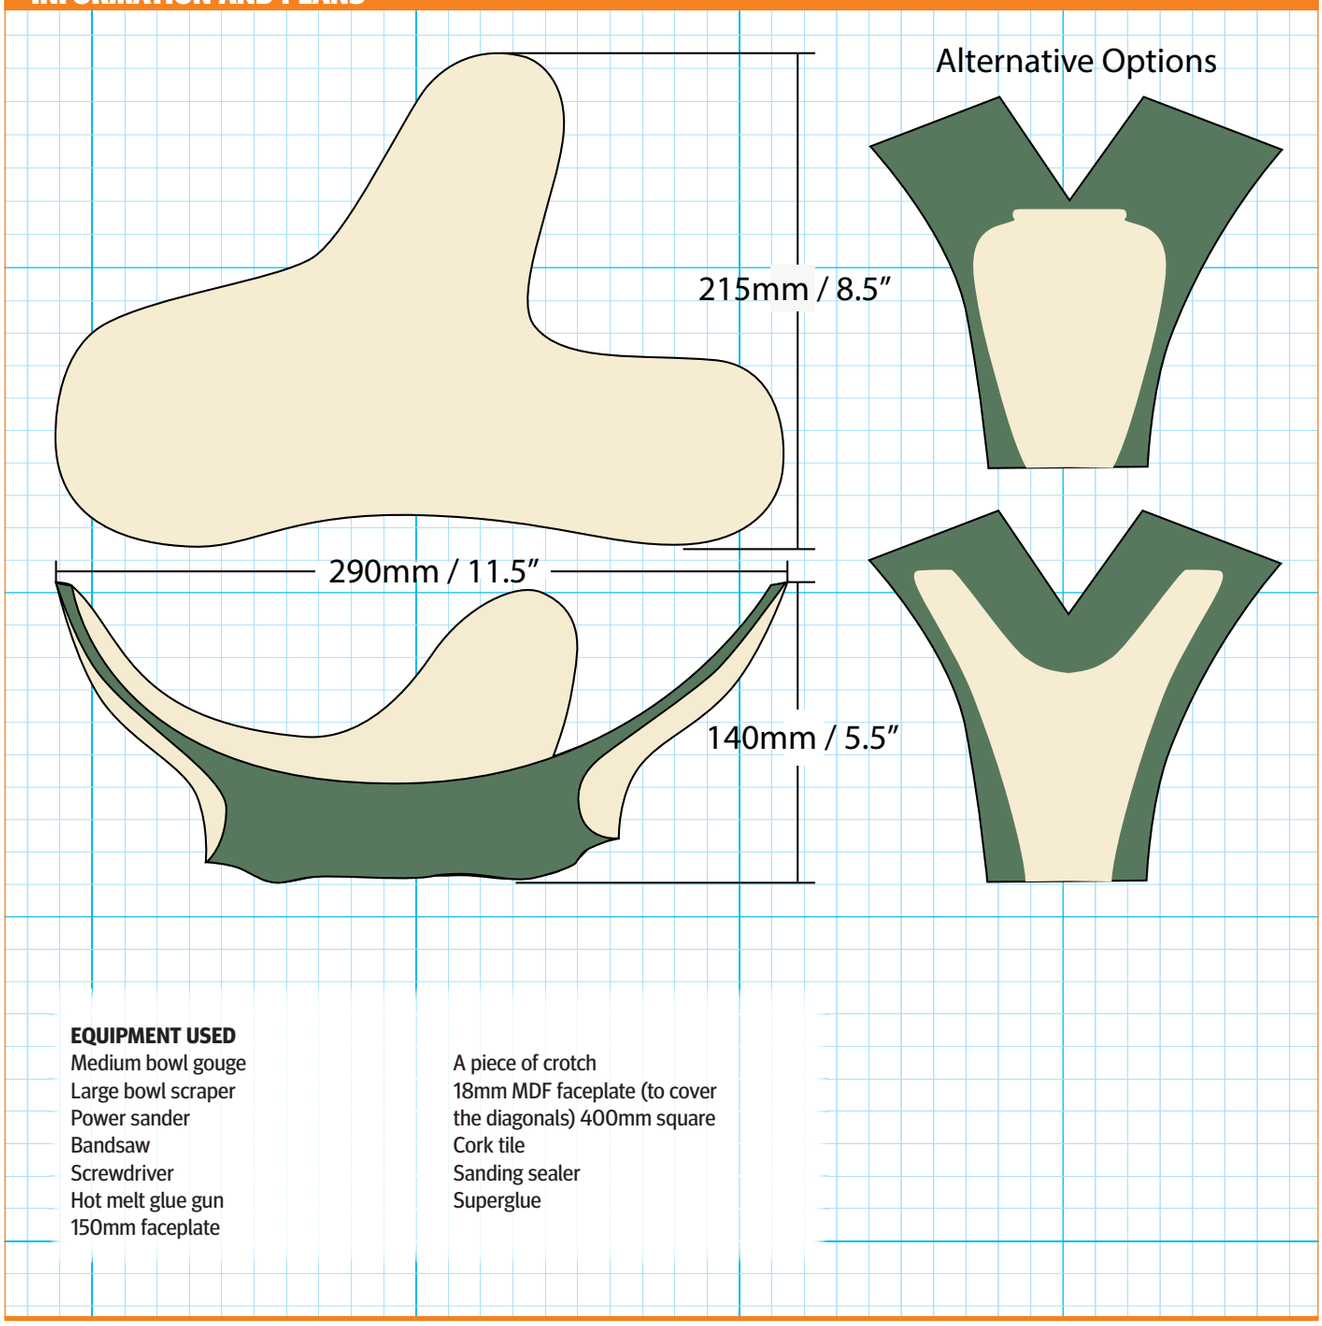
INFORMATION AND PLANS



EQUIPMENT USED

Medium bowl gouge
Large bowl scraper
Power sander
Bandsaw
Screwdriver
Hot melt glue gun
150mm faceplate

A piece of crotch
18mm MDF faceplate (to cover the diagonals) 400mm square
Cork tile
Sanding sealer
Superglue

1 Take your piece of crotch and remove any extraneous material. In this case I carefully prized the wrapper of ivy from my holly and put it to one side for possible use later – as I originally intended to use the ivy to make a stand for the finished item. I always avoid discarding pieces of wood that might come in handy later. Offcuts are often useful for testing finishes, etc.

2 Using a scrap of MDF – mine was recovered from a previous jig – locate the centre and draw on a circle just larger than the diameter of your faceplate. This will enable you to accurately position it for screwing on
